EDUCATION

The University of Lahore

B.Sc. in Software Engineering

Lahore, Pakistan

Feb 2021 – Feb 2025

- Relevant Coursework: Data Structures and Algorithms, Database Systems, Software Quality Engineering, Data Mining, Natural Language Processing, Web Development

PROFESSIONAL EXPERIENCE

Full Stack Developer

SuperTech — Remote, Contract

Nov 2024 – Aug 2025

Italy

- Built and deployed a Shopify-integrated AI chatbot platform serving **80+ merchants**, improving engagement by **45%** via personalized AI-driven recommendations.
- Integrated **15+ Shopify REST APIs** handling **5,000+ daily requests** with 99%+ availability; resolved critical concurrency failures restoring production stability.

Software Engineer Intern

Tech for Good — Remote

Jun 2023 – Aug 2023

US

- Built healthcare portal modules with **React** and **Node.js** serving **1,200+ users**; reduced appointment booking time by **60%** through API and workflow optimizations.
- Optimized SQL queries and collaborated in a **6-member Agile/Scrum team** through full sprint cycles.

PROJECTS

NaqlaAI | Live Demo | GitHub

Java 21, Spring Boot, Next.js 14, LangChain4j, Terraform, PostgreSQL, Redis

- Deployed a **production logistics SaaS** on **AWS ECS Fargate** behind ALB; provisioned all infrastructure (VPC, RDS, Redis, ECR, Secrets Manager) via **Terraform** with 7+ reusable modules.
- Built **LLM-powered multi-agent layer** (query + action agents) with LangChain4j; Redis-backed session memory and response caching to cut AI latency.
- Implemented **JWT + RBAC** with BFF pattern in Next.js 14 (HttpOnly cookies); enforced role-based access at Spring Security layer for ADMIN, MANAGER, and VIEWER roles.

LinkVault | Live Demo | GitHub

Python, FastAPI, PostgreSQL, Redis, RabbitMQ, Grafana, Docker

- Architected a **production-grade URL shortener** achieving **1,000 req/sec at under 50ms latency**; click events published to **RabbitMQ** asynchronously without blocking user-facing responses.
- Built **event-driven analytics pipeline**: async worker batches clicks every 5 seconds, flushes to PostgreSQL atomically; **Dead Letter Queues** guarantee zero data loss on failure.
- Instrumented full observability with **OpenTelemetry, Prometheus, and Grafana**; circuit breakers and timeout isolation maintain uptime during dependency failures.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, SQL

Backend & Systems: Spring Boot, FastAPI, Node.js, REST APIs, Microservices, Event-Driven Architecture, WebSockets

Frontend: Next.js, React, Tailwind CSS, ShadCN UI

Cloud & DevOps: AWS (ECS Fargate, RDS, ECR, IAM, VPC, ALB, Secrets Manager), Docker, Terraform, GitHub Actions

Data & Observability: PostgreSQL, MongoDB, Redis, RabbitMQ, Dead Letter Queues, OpenTelemetry, Prometheus, Grafana

Security & AI: JWT, RBAC, Spring Security, Trivy, SonarCloud | LangChain4j, OpenAI API, Multi-Agent Systems

CERTIFICATIONS

System Design and Architecture — University of Alberta

Preparing for Google Cloud Developer — Coursera

Preparing for AWS Solutions Architect — Coursera
